

The logo for 'The Alivizatos Treatment Program' is contained within a light green oval with a white background. The text 'The Alivizatos' is in a large, serif font, with a registered trademark symbol (®) to the upper right of 'Alivizatos'. Below it, 'Treatment Program' is written in a smaller, italicized serif font.

The Alivizatos<sup>®</sup>  
Treatment Program

The background of the advertisement is a photograph of the BioCare Hospital & Wellness Center building. The building is a two-story structure with a white facade and a prominent red horizontal stripe. Large glass windows and doors are visible, some reflecting the sky and others showing the interior. In the foreground, there is a red-tiled patio with two sets of black wrought-iron tables and chairs. A set of stairs leads up to the building's entrance. The sky is a clear, deep blue, and there are green trees and plants around the building.

# A General Overview

- Why should I consider the Alivizatos® Treatment program?
- What is so different about this protocol?
- The Underlying Philosophy

It is known that poisoning the whole body to kill specific cells has had limited success and generally destroys much of the patient's quality of life. Some patients, actually most patients, will tell you that the side effects from chemotherapy treatments are far worse than the symptoms of the cancer.

Surgery has limited success because it frequently does not remove all the cancer cells and ultimately becomes a delaying tactic rather than a genuine long term solution.

The Alivizatos® Treatment works on all types of cancer and we will accept patients at all stages as long as they are able to make the trip to the International Bio Care Hospital & Wellness Center.

This treatment utilizes a process that regenerates, enhances and modulates the immune system so that the body can withstand abnormal influences.

## Protocols

Most typical cancer protocols attack other aspects of the patient's health and cause multiple complications, some of which are very serious and debilitating. It is our philosophy to strengthen the body, enhance the immune system and the natural disease fighting aspects of the patient while starving the cancer and creating a host environment that is not conducive to the growth or reproduction of the cancer cells.

For our program to be successful it is most important for all patients to adhere to what we call The Alivizatos Diet. This diet is primarily low in protein, acids, and dairy products. It is a nourishing, wholesome healthy eating regimen that will be given in writing to all patients at the beginning of their treatment stay. The drinking of water is very important to the success of the Alivizatos® Treatment. A minimum of eight glasses of water per day is mandatory to flush the dead cancer cells out of the body. Obtain more Alivizatos Diet information from our website.

This is a different approach to combat  
**cancer | tumor | illness| disease**

**The Alivizatos® Treatment program** is typically a 20-day protocol. However, those suffering with Lupus or who have liver involvement are usually prescribed a 30-treatment program, adding an additional 10 days to their stay.

Normally, the patient can expect to see or feel some improvement in the first week but the treatment will be most effective about 30 to 45 days after the last injection and will continue to work for up to six months. As with any treatment, the Alivizatos® Treatment does not help everyone, nor does it claim to do so.

There are essentially no adverse side effects. Patients will most often be somewhat fatigued in the early afternoon during the treatment period and for a month or so after the last treatment. Some patients experience flu-like symptoms during the first week of the treatment period. Hot flashes and chills at times accompany those symptoms but these minor side effects will soon disappear. These reactions are normal and temporary. We recommend that the patient rest as much as possible.

Surgical procedures during the treatment period are not advisable unless an emergency arises. Radiation and x-rays should not be prescribed during or within sixty days after the treatment, as they are deleterious to the Alivizatos® Treatment.

Patients who must receive radiation should consider receiving it a minimum of seven days prior to beginning the Alivizatos® Treatment or wait at least sixty days after receiving the last treatment. If a life-threatening condition should occur and radiation will reduce the size and/or bulk of a tumor, and the patient opts for same, they should consider the administration of booster treatments after the radiation.

# Current Cancer Treatments

There has long been an interest in, and considerable effort expended toward, relieving the pain as well as other acute symptoms and achieving remission of cancer in humans. Presently there are a number of methods and techniques for the treatment of cancer that may include surgery, chemotherapy and radiation therapy. The common characteristics of these techniques, as well as any other presently known technique, is that they are 'Extra-Cellular' in scope. That is, the cancer cell is attacked and attempted to be killed through the application of a killing agent or force outside of the cell. These extra-cellular approaches have been found to be less than satisfactory because of the difficulties penetrating the cancer cell's tough outer membrane.

To overcome the protection afforded the cancer cell, in these techniques the attack on the cancer cells must be of such intensity that considerable damage is caused to the normal cells, resulting in severe side effects for the patient. Some of these side effects such as extreme nausea, hair loss, severe gastric problems, rapid weight loss and weakening of the immune system, have been found to considerably limit the effectiveness and usefulness of these treatments.

At the present time a relatively large number of chemical compounds are recognized for use in clinical therapy for cancer in humans. These anti-tumor agents, most of which have severe toxic effects, are applied by intravenous administration resulting in various therapeutical problems for both the physician and the patient. A safe and effective cancer treatment has been the goal of researchers for a long time. Such a technique, to be successful in the destruction of cancer cells, must be selective in its effect upon the cancer cells, be non-toxic and produce no irreversible damage to the normal cells.

In addition, the treatment should reduce the pain normally associated with cancer and restore the appetite of the patient in order to regain normal body strength. We have all had friends or family members who have endured one or more of the above cancer regimes, so it goes without saying that the need to find a safe, non-toxic treatment is as great today as ever before. The Alivizatos® Treatment works on all types of cancer and we will accept patients at all stages so long as they are able to make the trip to the Bio Care Hospital. We believe that the Alivizatos® Treatment, although not a "cure", is a treatment that has given quality to and extended the lives of many thousands of our patients. Many have been in total remission for years. This is a safe and effective treatment that you should consider.

## What's Next?

The Alivizatos® Treatment is only available at the International Bio Care Hospital and Wellness Center located 35 minutes from downtown San Diego, California where the airport is located. This is a completely modern, full service facility with surgery room, caring, compassionate nurses and is an internationally accredited 31 bed capacity hospital with 7 bilingual medical doctors on staff and other specialists are called in for consultation as needed. Designed with the patients' comfort in mind, there are 15 spacious in-patient hospital rooms. Outpatient facilities are also available.

This program has been administered in Mexico since February of 1984 and the records indicate that some 80% of the patients utilizing this protocol are being assisted as to their quality of life and added longevity. We are able to administer to any number of patients per day since there is rarely any waiting list. We do prefer that patients begin their treatment on Monday due to the availability and scheduling of laboratory facilities. A valid US passport is mandatory to re-enter the United States.

# The Coordinating Office

To participate in this program, it is required that advance notice be given for both **NEW** as well as **BOOSTER** patients. Please call toll-free 800-262-0212 or go to [alivinfo@gmail.com](mailto:alivinfo@gmail.com) and make arrangements to confirm your arrival.

**The Coordinating Office of the Alivizatos® Treatment program** is located in San Diego, CA and is open office hours Monday to Friday (Pacific Time Zone). All numbers have after hours answering machines and you will receive a callback as soon as possible. The Coordinating Office primarily sends out brochures and can make confirmed reservations for your accommodations on either side of the US/Mexico border or at the hospital. Additionally, the coordinators can answer most of your questions and supply you with the necessary information for your stay while you receive the Alivizatos® Treatment.

**We will need the following information:** Patient's name, address, phone numbers, email, diagnosis, arrival date, companions and housing requirements.

## **Transportation:**

Costs will vary depending on the distance you travel to get to San Diego, California.

## **IBC Apartments:**

We have 9 outpatient units varying in size and price. From a 1 bedroom without kitchenette, one bedroom with kitchenette, 3 bedrooms with full kitchen, junior studio suite and VIP suites. Minimal cost for all meals in our hospital dining room with delicious meals from our all-organic kitchen.

# Frequently asked questions

Where did this treatment come from?

Who developed it?

How new is it?

How does it work?

What is in the treatment?

How long does it take?

What about the side effects?

What is the cost?

What are the requirements?

What kind of results should

I reasonably expect?

Dr. Hariton Alivizatos, M.D., Ph.D., is the inventor/developer of the Alivizatos® Treatment protocol. He was born on the Island of Limnos in the Aegean Sea. While an undergraduate in medical school, he became interested in cancer research and continued four more years of research at the University of Athens, School of Medicine. In 1975, with the assistance of his father who had been the doctor in charge of St. Leo's Hospital, Dr. Alivizatos started treating humans.

This treatment utilizes a process that regenerates, enhances and modulates the immune system so that the body can withstand abnormal influences. The treatment pierces the protein and lipid layers of the cancer cells, literally opening the door to the infusion of those cells to effectively begin correction of the patient's metabolism.

The resulting effect starves the cancer cells and enhances the condition of the healthy cells. Accordingly, the reproduction of cancer cells is significantly inhibited while the reproduction of the healthy cells is stabilized. The expected result is normally rapid remission and eventual disappearance of the malignancy.

The Alivizatos® serum consists of mega doses of vitamins, minerals and amino acids put together in a complex form. The daily dose is 10cc administered intravenously. Everything found in the Alivizatos® serum is found in the human cell. Inasmuch as the Alivizatos® Treatment is non-toxic, non-biological and non-specific; it is able to pierce the brain-blood barrier, much to the benefit of those suffering from brain tumors. The immune system is enhanced and modulated so that the body can take over control of any disease. If your immune system had been strong, you would not have cancer. It is important to note that this treatment is non-toxic, contrary to the traditional chemotherapy protocols. It is a non-specific enhancement of the entire immune system. Non-biologic means that it is not a vaccine. There have also been significant benefits for those suffering from diabetes, arthritis, emphysema and other related diseases.

# Treatment Cost

New patients will normally receive 20 full treatments after being evaluated with a full medical history and physical examination by the assigned attending physician. This may include a review of past medical record and imaging/laboratory information. These tests will give you and your doctor better information as to your condition and will be done periodically during the treatment period to monitor your progress. Based on your diagnosis and progress, your attending physician will determine the time and length of follow up or "booster" treatments. You can get an accurate quote of your particular program by contacting us at 1-800-262-0212 or [alivinfo@gmail.com](mailto:alivinfo@gmail.com)

Most private insurance companies in the United States honor claims for medical services from International Bio Care Hospital. We advise you to request more information based on your particular health insurance policy through our insurance coordinating office by contacting us at our toll free number or [alivinfo@gmail.com](mailto:alivinfo@gmail.com)

## Payment:

All payments are to be made in advance and in U.S. Currency. We accept all major credit cards. You can also pay by cash or personal check for the full amount at the beginning of the treatment period.

## Medical Insurance Information:

IBC Hospital will process claims to your insurance company. Insurance payments will be based on "reimbursing" the patient less a 20% charge for administrative costs when an insurance payment is received by IBC Hospital.

## Requirement:

At your initial consultation, please provide copies of your full medical records, x-rays, CT Scans, etc. These should include whatever treatment you have had, copies of hospital or doctor's records, (if possible) and your **DIAGNOSIS FROM YOUR DOCTOR**. Please be sure to get all of your medical records returned to you by your Doctor at IBC Hospital at your last appointment before your homeward departure.

The Alivizatos® Treatment program is being used principally for the treatment of patients with cancer. The hospital will also include patients seeking treatment for emphysema, diabetes, arthritis, lupus, autoimmune disorders and for prevention as well.

What is being offered is not a panacea. The Alivizatos® Treatment protocol does not help everyone and you are not helped overnight. Normally, you will see improvement the first week. As previously mentioned, our records indicate that the treatment will be working for you the hardest some 30 to 45 days after your last injection and will continue to work up to six months.

# Testimonials *View video testimonials on our website.*

## **Avon K., Wisconsin**

Diagnosed with Stage 3B Her2 aggressive breast cancer with mets to lymph in December 1994. I had four chemo treatments in the states which were not tolerated. Doctor said it would kill me faster than the cancer would. I was given less than a year to live. To this day I am alive and well. Working and with lots of energy because of the yearly Alivizatos® Treatments at International Bio Care Hospital & Wellness Center. I highly recommend it!

## **Willie H., North Carolina**

The Doctor wanted to operate to remove a piece of the tumor in my spine, but told me the operation would probably leave me paralyzed from the waist down. Instead, I came to the Hospital in Mexico and underwent their treatment. The tumor is shrinking daily. It has been many years and the Doctors here are amazed at the progress without surgery.

## **Dan W., Arizona**

Along with several other medical problems, I was diagnosed with prostate cancer. I refused to do "western" medicine for the cancer. When I started being serious about going for the Alivizatos® Treatment, my wife and I paid International Bio Care Hospital & Wellness Center a surprise visit. I am the one who was surprised. They had ultra clean facilities and a very courteous staff. I soon went to Mexico for Alivizatos® for the first time to receive treatments.

As a result of the Alivizatos® Treatment and the change in lifestyle they suggest, my PSA went down, my hearing got better and I have not had to use hearing aids since then. I have not had to use narcolepsy medicine for my sleeping disorder and both my cholesterol and triglycerides numbers have gone down significantly. Additionally, I have lost about 30 needed pounds. Since that first visit, I have been back for regularly scheduled follow-ups. I speak very highly of the treatment and recommend it to anyone and everyone.

## **David R., Wisconsin**

Diagnosed with 8X8 cm. Lung Tumor and Tumor in the right and left Adrenal Glands. I was told they were inoperable and I had only four to six months to live.

Through the grace of God, my wife, my parents and I found our way to Mexico and the Alivizatos Cancer Program. In short, my cancer was gone. I can truthfully say, without reservation, that the Alivizatos Treatment and many prayers saved my life and restored my health. Thank you for the opportunity to speak out.

## **Sam H., North Carolina**

Only two months before my birthday, I was told by the doctors that I would not see my 18th birthday. Their radiation had caused the tumor in my spine to triple in size. The Alivizatos treatment removed the tumor and I have survived these many years.

## **Sue P., Arkansas**

Diagnosed March 1994, Squamous Cell Carcinoma, Cervical. After 4 recurrences, 2 radical surgeries, several minor surgeries and massive radiation to the point of severe tissue damage, I was told there was nothing more we could do except to try chemotherapy.

Since I had been told by several oncologists that chemo was not usually effective with my type of cancer, I declined the chemotherapy. In Oct. 1995, after speaking with a former Alivizatos patient, my family and I decided I did not have anything to lose in trying the Alivizatos Treatment. After 20 treatments (and 6 months later, 10 booster treatments), I was pronounced cancer free. I continued with only two or three more rounds of Alivizatos® booster treatments, and remained in total remission for almost 8 years. In 2003 biopsy results confirmed a recurrence of the Squamous Cell Carcinoma. I went back for a full round of 20 Alivizatos® treatments, 3 months later the tumors had decreased a little bit in size, 6 months later, they did not show up on the scans. My Oncologist does MRI scans approximately every 6 months and they still do not show up. I feel as though I am truly blessed to have heard of the Alivizatos Treatments and do not miss an opportunity to share my experience with anyone whom it may benefit.
